EVENT 2026 · Poster

Poster title goes here in one or two lines

A subtitle that says what the poster shows

Ada Example[1], Ben Sample[1,2], Chris Placeholder[2]

[1] Example Institute, Example City
[2] Another Laboratory, Another City

Text and Markdown

Every card is a **block** in `poster.yaml`. Its text lives in a Markdown file like this one, so prose can be edited without touching the layout.

- Bullets start with `-`
- Use **bold**, *italic*, `code` and links
- `<br>` breaks a line in titles and labels

Numbers

Parts are stacked in the order given. This card has a **text** part and a **stats** part.

123 things counted

45 of them interesting

6 % share that matters

How you work with it

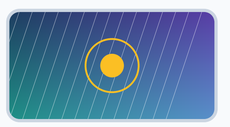

Edit, build, look

Change a sentence, run `python main.py`, open `dist/poster-preview.png`. The body size is fitted to the page.

Colours and fonts

They come from a **theme**, chosen in one line: `theme: neutral`.

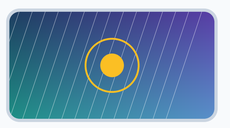

Gallery

A generated PNG, cropped to fill.

An SVG, kept as vector.

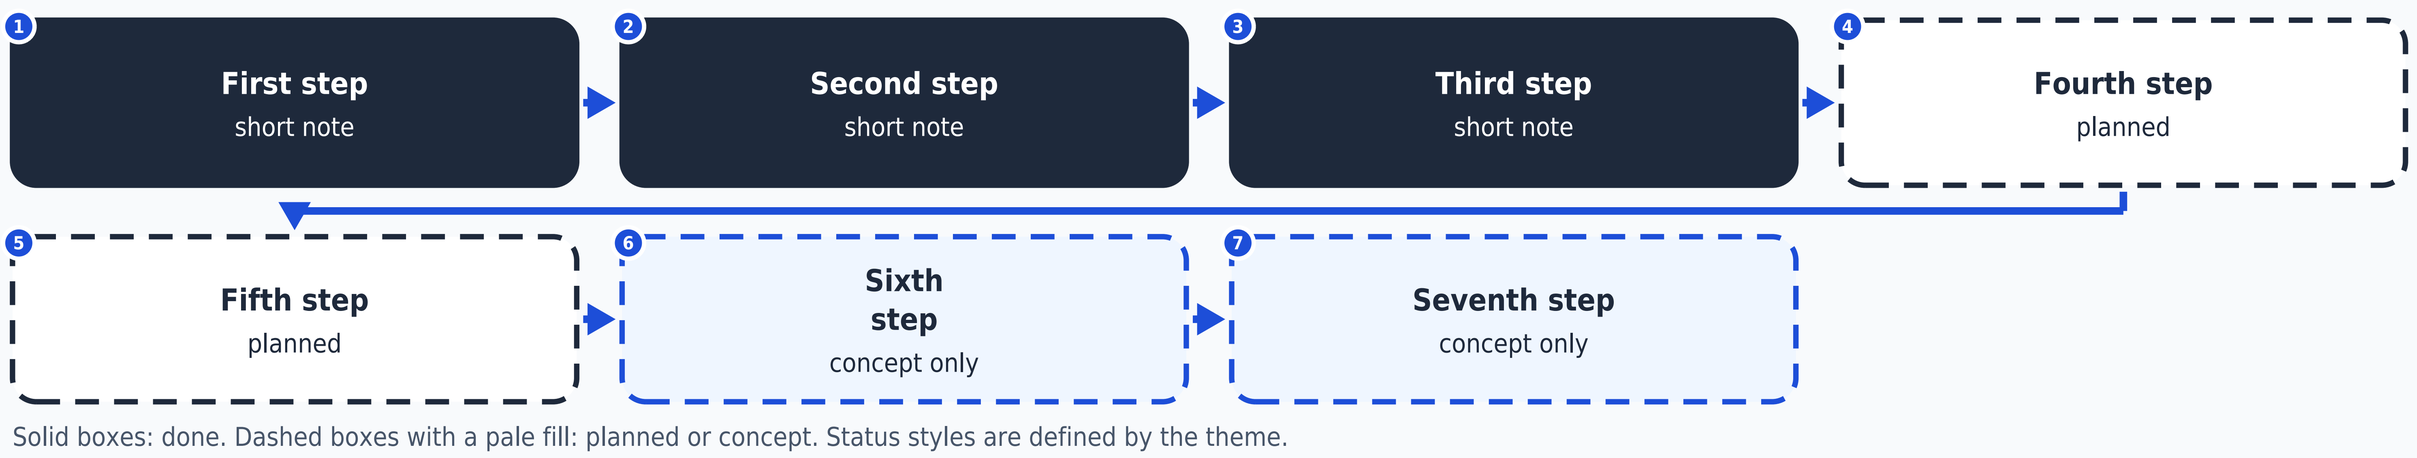

Same file, other crop.

not-there-yet...

Placeholder: file missing.

Flow with status

Solid boxes: done. Dashed boxes with a pale fill: planned or concept. Status styles are defined by the theme.

Table and picture row

A table has a `header`, `rows` and optional `col_widths` (relative weights). Cells accept the same inline Markdown.

Source	Target	Note
`field_a`	property one	required
`field_b`	property two	**optional**
`field_c`	property three	see GUIDE.md

Same height.

Raster and vector.

Never cropped.

Images

SVG figures stay vector in the PDF; PNG and JPG are embedded as they are. A missing file can show as a dashed placeholder (`placeholder: true`).

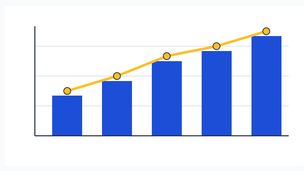

Figure 1. A sample SVG chart. Replace it with your own figure.

Key message

A block with `frame: false` has no card: use it for one key message that should stand out on the page.
